

Integration and Installation of exorbyte Commerce Search into your own Webserver

Note: With this integration approach you may have to make some code modifications and reinstall code packages.

Step 1: Choose a package and register (instructions see online)

Step 2: Prepare and store product data (instructions see online)

Step 3: Integrate into your Online Store / Portal

- Click on “Shop Integration” in the navigation bar on the left and fill out all necessary fields. Please choose the appropriate integration approach:
 - Pure JavaScript
 - Webshop with Java
 - Webshop with PHP
 - Webshop with ASP
- Click on “Test Your Integration Now” in the navigation bar on the left to see your store with the new search. Test the search simply with some search queries. Please note that you have not made any design settings yet.
- Please click on “Submit for Setup” if everything is shown properly. You will receive an email requesting to download your customized installation package.

Installation Package

The installation package contains the following data:

- Local demo page - to test the configuration on your webserver
- index.html - to test the search on your webserver
- PHP-Proxy / Servlet-Proxy - according to your utilized platform technology (php, java, asp) you will receive a proxy file, e.g. suggest.php
- CSS-Files - configurations files that determine the look of the Auto-Suggest

Integration

1. Extract the ecs-package-folder into the root directory of your webserver. Your store should have access to that. Note: If you have to extract the package into another subfolder, you have to adapt all relative paths to the new folder.
2. Copy the integration code from the file index.html into the header (head tag) of your own main index page (e.g. index.html) or in your main layout templates:

```
<!--[if !(IE 6)]><!-->  
<script src='https://content.exorbyte.com/sn/lib/jquery-loader.js'  
type="text/javascript"></script>  
<script src='https://content.exorbyte.com/sn/lib/jquery-1.4.2.min.js'  
type="text/javascript"></script>  
<script src='exo-loader-demo.js' type="text/javascript"></script>  
<!--<![endif]-->
```

Step 4: Configure your project as required

Now you can configure your new search software exorbyte Commerce Search as required, according to your chosen package. Please bear in mind that you have to click on "Submit for Setup" for each change. Modifying the code may be necessary.
